

PLASTIC CLOCK CRYSTALS

The PM System of plastic clock glasses provides a simplified method of stocking and ordering. The system can never become outdated since every new type can easily be incorporated into the existing order. Each PM plastic clock glass is individually packed in a clear plastic bag with complete stocking information. In order to select the correct glass for your application you must first determine the basic shape, e.g. Round, Rectangular, Oval, etc. These basic shapes are shown at the top of each page and are represented by the letter designation in the stock number. Next you must determine the chief dimension of your glass in mm.

- OP Round Glasses—Outside Diameter
- BP, RP Rectangular Glasses—Longest Side
- EP Elliptical Glasses—Longest Dimension

Once the dimension is gotten, look for the make of the clock and choose the correct glass accordingly. The illustrations of the cross sections should aid you in selecting the right glass. In addition the overall shape of the glass is shown for the special glasses.

| Dimension Make | Cross Section Order Number |
|----------------|----------------------------|
| 49 Solo | OP 49-2 |
| 49 Jerger | OP 49-3 |
| 49 Europa | OP 49-8 |
| 50 Junghans | OP 50-4 |
| | 50 - OP 50.1 |
| | 50 - OP 50.3 |
| | 50 - OP 45.1 |
| 50 Europa | OP 50-6 |
| 50 Imhof | OP 50-3 |
| 51 Swiza | OP 51-1 |
